

4 Skin Care Ingredients that Really Work

Farmacy products have most of their ingredients in common and we can assure you, this is no coincidence. Our products are formulated from real ingredients that have been proven time and time again to not only be effective, but also safe to use on your skin.

Instead of opting for products that are chock full of parabens and chemicals, find ones that are natural and gentle on your skin. But keep in mind: just because a product is natural, doesn't mean it will be an effective treatment for your skincare concerns. Luckily, we put together a list of four ingredients that truly work on your skin. These are four main active skin care ingredients that we have found to be outstandingly successful in creating and maintaining a healthy complexion.

Echinacea GreenEnvy™

The Echinacea Purpurea is considered one of the world's most powerful plants, and has allegedly been used for over 400 years. The plant was even used as early medicine by Native Americans to treat wounds, burns, bites, aches, and coughs. Essentially, Echinacea Purpurea is a natural wonder.

When it comes to skincare, one of the best ingredients to use is the [variant of the Echinacea Purpurea called Echinacea GreenEnvy™](#). A patent-protected variant, Echinacea GreenEnvy™ contains a high amount of cichoric acid, which is known to produce collagen and brighten and firm skin.

So why is Echinacea GreenEnvy™ such a fantastic skincare ingredient? The reason it's an incredible additive is because it is great for locking in hydration naturally. Echinacea

GreenEnvy™ also has anti-inflammatory properties and is even believed to help fight the bacteria that blocks pores.

ProForm Vitamin C

If you're seeking a do-all ingredient, [Vitamin C is certainly the answer](#). Vitamin C is included in skincare products because of its multi-purpose properties—not to mention it's completely natural and is safe on the skin's surface.

Vitamin C should be sought after due to its ability to defend the skin against free radicals (this kind of protection helps against pollution and sun damage). Even better, Vitamin C reduces brown spots because it gives the skin the boost it needs to help heal itself. As an added bonus, it helps boost collagen production which is absolutely crucial for anti-aging properties.

A variant to it, known as ProForm Vitamin C, is an extremely stable form of Vitamin C that effectively restores brightness and even skin tone.

Triple Hyaluronic Acid Complex

Triple Hyaluronic Acid Complex is one of the best additives to keep an eye out for in skincare ingredients. [Triple Hyaluronic Acid Complex is created](#) via biotechnology, but is safe and gentle on the skin.

This complex boosts skin's natural moisture at different levels. First, it seals in moisture at the surface of the skin, then it supports the production of antioxidants, and finally, it promotes the

creation of collagen and elastin. All of these properties together make for moisturized, firm, and more elastic skin.

Echinacea GreenEnvy Honey™

If you're seeking the ultimate super-tool for skincare, then the answer is definitely honey. Honey is known for being the cure-all skincare product because it can really help heal the skin struggling with a number of issues.

Honey is naturally moisturizing, and adding it to your skincare routine ensures the skin stays naturally hydrated. In addition to that honey helps clean out pores, is a gentle exfoliator, and can even treat inflammation, acne, and skin tone.

Knowing how healing honey is for skin, then it's safe to assume that the ultimate mix of skincare super products would be honey and Echinacea GreenEnvy™. These ingredients together make Echinacea GreenEnvy Honey™, and it's full of natural antioxidants. It helps naturally attract moisture and provides hydrating effects for supple skin.
